The ERIK Network Position on the role of Innovation Support Measures in European and Regional Policies

- The Network **underlines** the crucial role of regions in building innovative capacities and in strengthening regional research and innovation systems:
 - Establishing strategic planning for innovation
 - Building regional partnerships
 - Assisting SMEs and the creation of NTBF
 - Supporting R&D expenditure
 - Placing more focus on policy evaluation and benchmarking

- 
- A faint, orange-toned map of Europe serves as a background for the text.
- The Network **welcome** the Third Cohesion Report and the proposal for the Council Regulations laying down general provision on the Structural Funds and the Cohesion Fund that set innovation and the knowledge economy at the top of policy agenda
 - The Network **welcome** incorporation of the Lisbon and Gothenburg objectives to the EU Cohesion Policy that is to become a "key vehicle" for their realization. This demonstrates that innovation is considered instrumental for regional development.
